As a 35 year native of Las Vegas I believe we should accept the dump.

The dump cannot do any more damage to the environment than the 20+ years of nuclear testing did.

The state of Nevada should agree to accept the dump in exchange for large disposal and transportation fees. These funds should then be used to advance the installation of alternative energy sources across the Yucca Mountain area. With some of the highest sunshine totals in the US, the State of Nevada could become an exporter of clean, cheap electricity.

Let's make something positive of this project! It's going to happen regardless of the millions our state will spend to fight it.

Thank You,  
Bryan Banke
